

Advantages of using renewable energies in the logistics sector

Abandonment of non-renewable sources (fossil fuels) and **reduction of CO₂ emissions**

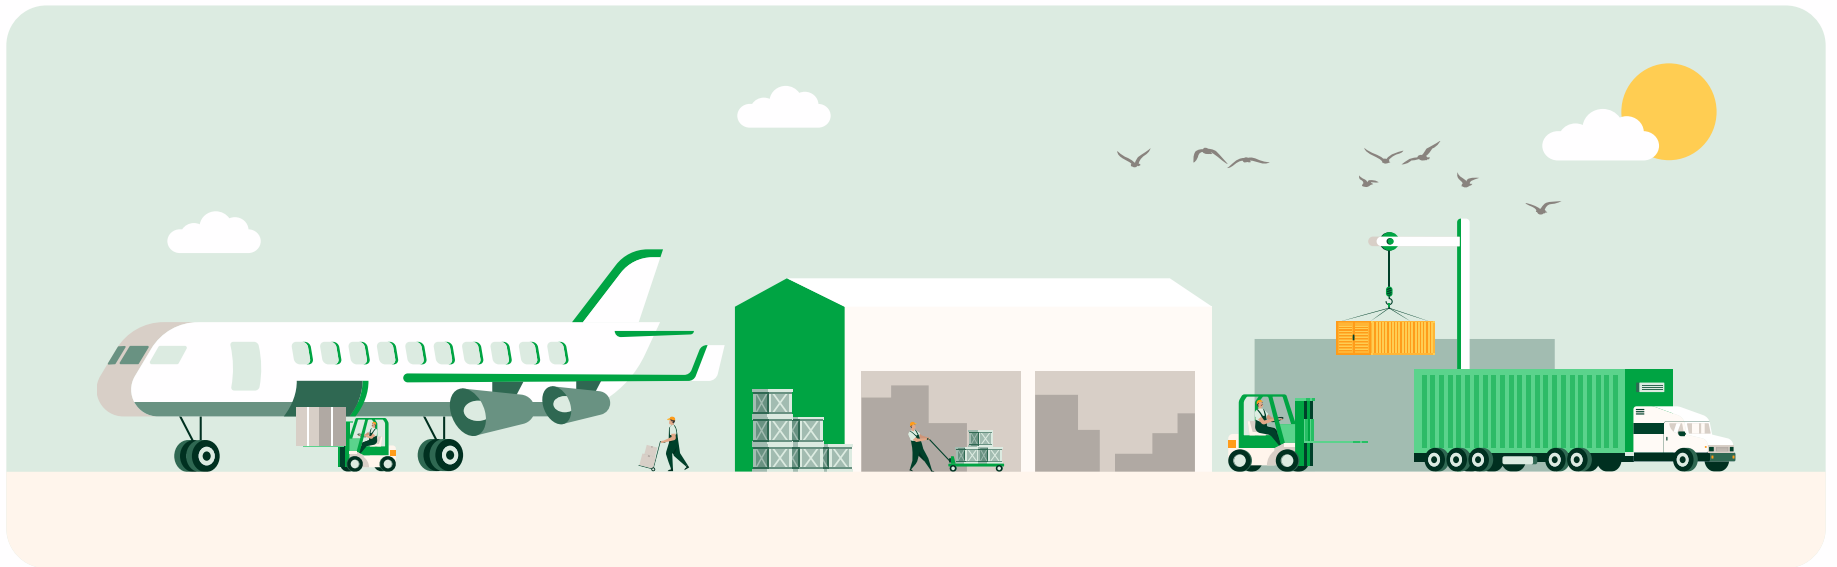

Competitive advantage over the competition as a differentiator

Reducing energy costs through **self-generation of electricity**

Improving the **quality of life** of workers and surrounding communities

Boosting the **corporate image** as an environmentally responsible company

Reduction of **noise pollution** associated with logistics processes

Compliance with **environmental regulations** and prevention of possible penalties

Attracting **new customers and suppliers** committed to sustainability
