17 PARTNERSHIPS FOR THE GOALS

Keys to understanding partnerships to achieve goals

Debts, theft and tax fraud

By November 2022, more than half (37 out of 69) of the world's poorest countries were at high risk of over-indebtedness or already suffering from it.

Digital divide

In 2022, 66% of the world's population (5.3 billion people) will be using the Internet, compared to 40% in 2015. In the same year, 259 million more men than women were using the Internet.

Achieving the SDGs

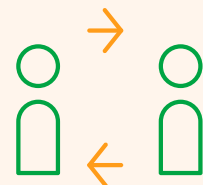

These can only be achieved through strong global partnerships and cooperation. Unions and alliances between different actors enable the mobilisation and sharing of knowledge, expertise, technology and resources.

Countries with the highest percentage of digital poor

Main causes

Stakeholder support for the SDGs has been steady but fragile, with significant challenges. Financial resources remain scarce and trade tensions between countries have been increasing. In addition, the global pandemic of COVID-19 brings with it a decline in foreign direct investment and a drop in remittances.

How can we achieve partnerships?

Helping developing countries to achieve long-term debt sustainability; improving inter-country cooperation in and access to science, technology and innovation; increasing international support for effective capacity-building activities; pursuing policy and institutional coherence; and enhancing the Global Partnership for Sustainable Development, among others.
