

Some key figures

Hard-to-abate sectors pose a major challenge in the fight against greenhouse gas emissions and the resulting climate change. This is shown by figures reflecting the scale of the challenge, according to a report published in July 2024 by Citi.

31%

of global GHG emissions come from hard-to-abate sectors

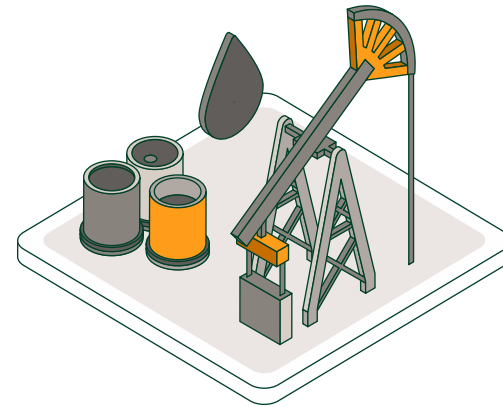

12

years until methane disappears from the atmosphere

60%

of energy generated today comes from fossil fuels

3%

of energy-related GHG emissions come from maritime transport
