Digital identity, protect who you are

How is your digital identity built?

With the information you upload to the **Internet.**

With information that others upload **about you.**

If you do not take care of it, it may be that...

Your image is damaged by **negative comments** about you.

Someone impersonates **your identity** (by publishing or performing actions in your name).

So, how to protect it?

1 Check the privacy settings of your social networks and decide who can see your posts, tag you, etc.

2 Periodically. look for your name on the Internet and check what information there is about you.

3 What you publish says a lot about you. Be careful with the information you share.

4 Protect your accounts with strong passwords and use different passwords for each one.

5 Watch out for public Wi-Fi's. Avoid accessing services that require personal information if you are not sure that you are on a secure network.
