

Iberdrola leads S&P's Sustainability Yearbook 2025

- *The electricity company chaired by Ignacio Galán is the No. 1 utility in the Dow Jones Best-in-Class Indices, formerly the Dow Jones Sustainability Index*

Iberdrola leads the electricity industry in the Sustainability Yearbook 2025, prepared by S&P, with the Top 1% S&P Global CSA Score. Europe's largest electric utility by stock market value obtained the best score in the Dow Jones Best-in-Class Indices, the former Dow Jones Sustainability Index.

The Sustainability Yearbook 2025 is a yearbook that includes 780 companies selected through the Corporate Sustainability Assessment (CSA) 2024 methodology, which ranks the companies analysed by industry.

The CSA is the leading assessment formula in its field, helping companies to make the link between sustainability and their business strategies. Covering more than 13,000 companies worldwide, it is an annual review of companies' sustainability practices and allows companies' performance to be compared across a wide range of industry-specific economic, environmental and social criteria. These criteria are relevant to the growing number of sustainability-focused investors and are expected to be financially relevant to their corporate success.

This leadership comes on top of the fact that Iberdrola has been in the Dow Jones Best-in-Class Indices for 25 consecutive years, making it the only European utility that has on the index this entire time.

The electricity company, one of the three largest in the world with a value of around €87 B, has fulfilled the S&P requirements that determine the members of the index. It complies with an increasingly demanding methodology that includes more than 120 sections related to sustainability, distributed into three general pillars: respect for the environment, social commitment and good corporate governance.

Iberdrola is a global benchmark in sustainability. It has once again received the highest "[A List](#)" from CPD rating in the list of the world's most transparent companies in climate change thanks to its commitment to disclosure, transparency, and environmental action. In addition to the Dow Jones Best-in-Class, it is on the main international [sustainability indices](#) such as Moody's ESG, MSCI, Sustainalytics, ISS-ESG, EcoVadis and FTSE4Good, among many others.

Self-sufficiency and combating climate change

Iberdrola continues to advance in its commitment to energy self-sufficiency and in its proactive role as an active agent in the fight against climate change. Iberdrola now has more than 44,000 megawatts (MW) of renewable capacity installed worldwide and 84% of its electricity production is emissions-free.
