

## INFORMATIVE NOTE

*This brings the amount of renewable megawatts under construction or in the pipeline in Spain to more than 2,500 MW more than 80% of the installed capacity forecast for 2022*

### Iberdrola steps up its commitment to clean energy with over 400 new photovoltaic MW in Extremadura

- **Two projects in Cedillo in the pipeline (100 MW) with grid access for the development of a photovoltaic plant of over 300 MW in the area**
- **Iberdrola's plan to relaunch clean energies in Spain includes the installation of 3,000 renewable MW in the run up to 2022**

Iberdrola steps up its commitment to clean energy with over 400 new photovoltaic MW, which the company is to put into operation in Extremadura. Two of the projects, the Majada Alta and Santa Antonio photovoltaic plants, of 50 MW each, will be built in the municipality of Cedillo in Cáceres. The company also has for a photovoltaic plant with a capacity of more than 300 MW in the same area, with access to the grid.

The two Cedillo plants, already presented to the Extremaduran Regional Government, will comprise 300,000 photovoltaic panels, and the construction phase could mean work for 200 people. It is scheduled to be commissioned in 2020.

Iberdrola foresees that another of its projects in the region, the Campo Arañuelo complex (Arañuelo I, II and III of 150 MW) will be the next to commence construction at the beginning of 2020. Its development -which could create another 200 jobs during construction- has a high local involvement since the engineering and environmental work has been awarded to the Extremaduran company Ecoenergías del Guadiana and the power transformers will be supplied by Faramax. The project also includes an energy storage system involving the use of an innovative battery.

#### **More than 2,500 renewable MW under construction or in the pipeline in Spain**

In Extremadura, Iberdrola is building the Núñez de Balboa PV plant—the largest under construction in Europe—and has in the pipeline, together with the Cedillo projects, the photovoltaic plants Francisco Pizarro (590 MW), located in Torrecillas de la Tiesa; Ceclavín (328 MW), in Alcántara; and Arenales (150 MW), in Cáceres, as well as Campo Arañuelo I, II and III (150 MW), in the Almaraz administrative district.

This brings the company's photovoltaic megawatts under construction or in the pipeline in the region to 1,800, making Extremadura the focus of Iberdrola's renewable strategy in Spain.

In Spain, projects under construction or in the pipeline, both wind power and photovoltaic, amount to over 2,500 MW -representing more than 80% of the installed capacity forecast by the company for 2022- in regions like Extremadura, Castilla-La Mancha, Navarre, Aragon, Andalusia, Murcia and Cantabria. The plan to relaunch clean energy continues to advance with the recent acquisition of three wind farms, with a total installed capacity of 117.8 MW: the BaCa (Ballestas and Casetona) wind farm complex, in operation, and the Puylobo wind farm, at the construction stage.

---

## INFORMATIVE NOTE

### Plan to relaunch clean energy in Spain

Iberdrola's plan to invest in renewable energies in Spain includes the installation of 3,000 new MW by 2022. By 2030, company forecasts point to the installation of 10,000 new MW. These actions will enable jobs to be created for 20,000 people.

In Spain, Iberdrola is the leader in renewable energies, with an installed capacity of 15,828 MW (over 30,300 MW worldwide), making its generation fleet one of the cleanest in the energy sector.

Iberdrola's commitment to a decarbonised economic model has led it to earmark 34 billion euros for global investments between now and 2022 in renewable energies, smart and robust distribution networks, and storage technologies, all on top of the 100 billion it has already invested since 2001.

### About Iberdrola

[Iberdrola](#) is a global energy leader, the number-one producer of wind power, and one of the world's biggest electricity utilities by market capitalisation. The group supplies energy to almost 100 million people in dozens of countries including Spain, the United Kingdom (ScottishPower), the United States (AVANGRID), Brazil (Neoenergia), Mexico, Germany, Portugal, Italy and France. With a workforce of around 34,000 and assets in excess of €113bn, it achieved a turnover of €35bn and a net profit of €3bn in 2018.

Iberdrola is leading the transition towards a sustainable energy model through investments in renewable energy, smart grids, large-scale energy storage and digital transformation, to offer its customers the most advanced products and services. Thanks to its commitment to clean energy, Iberdrola is one of the companies with the lowest emissions and an international benchmark for its contribution to the fight against climate change and to sustainability.
